FNP Land Price Data Aggregation

Municipality-Level Pastureland Prices in the Amazon

Leonardo Gomes

October 24, 2025

FNP Market Survey Data

Data Collection

- FNP conducts market surveys to estimate land prices
- Prices reported in R$ /ha for specific land types
- Annual estimates for subset of municipalities M

Data Structure

- Raw data: unique price estimates for each (m, t, y) combination
- $m \in M$: municipalities with available data
- $t \in T$: land types (e.g., *pastagem formada*, *pastagem nativa*)
- y: year of observation
- Many (m, t, y) combinations missing due to data availability

Land Type Classification

Macro-categories

- Land types T grouped into macro-categories (e.g., *pastagem*, *floresta*)
- Multiple subtypes within each category

Example: Pastagem Category

- *pastagem formada* (formed pasture)
- *pastagem nativa* (native pasture)

*Pastagem only has these two varieties in the post-2016 data

Municipality-Level Aggregation Process

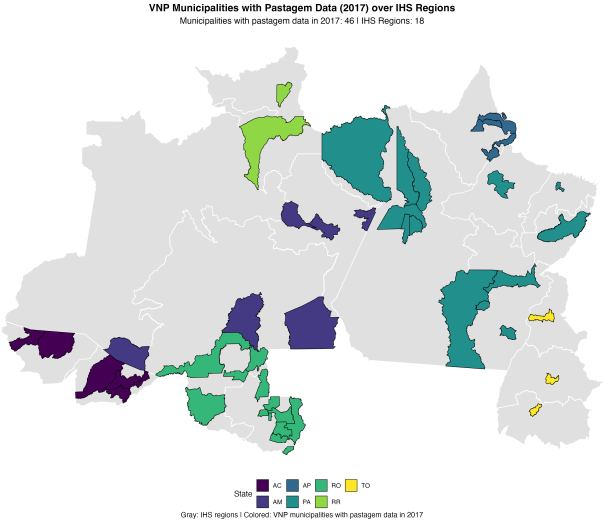
Step 1: Municipality-level aggregation

- For each municipality m in the 2017 sample:
- Identify all land types $t \in T_{\text{pastagem}}$ (pasture subtypes)
- Calculate mean price across all pasture subtypes for each year y

Final Output

- 46 Amazon municipalities with pastagem data $\times$ 7 years (2016–2022)
- Municipality-level average prices in R$ for 1ha of pastureland
- Each municipality represents a distinct spatial unit

Spatial Distribution: Pastureland Prices



Summary Statistics: Pastureland Prices

Year	N Municipalities	Min	Q1	Mean	Median	Q3	Max
2016	46	225	1,475	4,418	3,900	6,000	11,000
2017	46	245	1,680	4,442	3,900	5,958	11,000
2018	46	265	1,853	4,464	3,950	5,875	11,000
2019	46	265	1,850	4,482	3,950	5,875	11,000
2020	46	265	1,860	4,530	3,950	5,979	11,083
2021	46	275	1,938	4,812	4,192	6,429	11,500
2022	40	332	2,183	5,209	4,875	6,956	11,250

- Prices in R$ /ha
- Sample: 46 municipalities with pastagem data in 2017 (reference year)
- Note: 2022 has 40 municipalities due to missing data in some locations
